

## CUSTOM AND SPECIALTY BEARINGS

The bearings listed in this catalog are standard products or common sizes of products we have previously supplied.

Give us your requirements and we can create or modify a product for your specific application.

We have produced specialized bearings for applications from the nuclear industry to the food industry. As well as military applications, high pressure and/or high temperature applications, drilling equipment and more.

We can produce bearings up to 20" (500mm) in diameter. We have various grease types available to handle specific requirements related to temperature, pressure and working environment.

Typical lead time for specialty bearings is 14 to 20 weeks from receipt of order.
